Multi-Asset (1)	10% · ₹ 11.13 L
Flexi / Multi Cap (1)	9% · ₹ 9.96 L

🚨 Immediate action: Exit Nippon India Large Cap (₹20L) — Every single tranche across all 10 purchases is in the red. The NAV actively fell from ₹105 (Dec 2025) to ₹97.48 today. The ₹28K crystallised loss can offset LTCG gains (e.g. from Axis Midcap). All Jan–Jun 2025 tranches are past 12 months (LTCG) — verify exit load before redeeming. Compare: Canara Robeco Large Cap, bought the same month (Jan 2024), is +18.5%. This is a fund selection error, not a category mistake.

👑 Axis Midcap — Crown Jewel (LTCG ✓): ₹9.5L switch-in (Jun 2023, 36 months) has grown to ₹15.21L — +60.1% absolute, 17.53% CAGR. 100% LTCG. Est. tax ~₹57K if you redeem above ₹1.25L exemption. **Do not redeem.** At this CAGR it becomes ~₹34L in 5 years. The ₹28K loss from Nippon LC exit offsets any Axis LTCG if you need to book partial gains.

Nippon India Mid Cap — Timing illusion (mixed LTCG/STCG): Return of 8% looks low but ₹16L of ₹23L was deployed in Jul 2025–Apr 2026 (STCG, too early). Only the Dec 2023 tranche (LTCG, 30m) is fully mature. Hold and continue SIP — the blended return will improve as 2025–26 tranches cross 12 months.

Kotak Midcap — Textbook SIP (mostly LTCG ✓): All 36 tranches in profit. Aug–May 2025 tranches are LTCG. Jun–Jul 2025 lumpsums (₹4L) are borderline at 12 months. Jul 2025 onwards is STCG. Continue ₹25K/month SIP unchanged — do not increase, do not stop.

Parag Parikh Flexi Cap — All tranches now LTCG ✓: All 5 May–Jun 2025 tranches have crossed the 12-month mark (13 months). Currently flat at -0.44% due to USD headwinds (~30% international exposure). Quality fund with strong 10-yr track record. Hold until Dec 2026 before reassessing. The ₹6L top-up from Nippon LC redemption averages in at the same NAV band (₹89–92).

Canara Robeco Large Cap — Correct large cap fund (LTCG ✓): Jan 2024 tranche +18.5%, Dec 2024 building. Both tranches LTCG. Top up ₹8L from the Nippon LC redemption — brings total to ₹12.34L, addressing the large cap underweight (24.6% → ~29%).

Quant Multi Asset — Mixed LTCG/STCG: Apr 2024 (+33.5%, LTCG) and Dec 2024 (+6%, LTCG) are strong. Apr and May 2026 purchases are STCG (1–2 months) — too early to judge. Holds equity, debt and gold for natural diversification. No changes.

Mid-cap concentration: 59% of MF portfolio in mid/small cap (target 40–45%). After exiting Nippon LC and redeploying into large cap/flexi, this drops to ~41% — within range.

Single-stock risk: DELL is 23% of total net worth (₹ 58.09 L) and correlated with your employment. Systematic trim plan (tax permitting) reduces your largest concentration risk.

LTCG tax strategy: The ₹28K loss from Nippon LC exit offsets LTCG gains (e.g. Axis Midcap). Spread future redemptions across financial years to use the ₹1.25L LTCG exemption each year. HDFC Small Cap: only 3 tranches reviewed — get full history from MFCentral before making any decisions.

Analysis based on June 2026 transaction-level report (Groww/MFCentral data). Not financial advice — consult a SEBI-registered adviser.

Mutual fund rebalance overview

current vs an illustrative target mix — not advice

FUND	ACTION	AMOUNT	LTCG STATUS	RATIONALE
Canara Robeco Large Cap	TOP UP	+ ₹8L lumpsum	All LTCG	Proven large cap. Jan 2024 tranche +18.5% vs Nippon same vintage at negative. Fills 30% large cap target.
Parag Parikh Flexi Cap	TOP UP	+ ₹6L lumpsum	All LTCG	Quality global-diversified fund. All 5 tranches now LTCG. Average down at same ₹89–92 NAV band.
Axis Midcap	TOP UP	+ ₹4L lumpsum	All LTCG	Best compounder at 17.53% CAGR. One lumpsum top-up only — do not increase SIP.
Kotak Midcap	TOP UP	+ ₹2L lumpsum	6/8 LTCG	One additional lumpsum alongside existing ₹25K SIP. Do not increase monthly SIP amount.
Nippon India Large Cap	EXIT	Redeem ₹20L	3/5 LTCG	All 10 tranches in loss. ₹28K crystallised loss offsets LTCG elsewhere. Verify exit load before redeeming.

After rebalancing: Large cap 24.6% → ~29% · Mid cap 54.5% → ~41% · Portfolio: 7 funds → 6 funds (Nippon LC removed)

Source: Mutual Fund Portfolio Report, June 2026 (transaction-level data from Groww/MFCentral)

Step 1 — Verify exit load: Check each Nippon India Large Cap tranche in Groww or MFCentral before redeeming. May–Jun 2025 tranches are at the 12-month mark — redeeming even 1 day early costs 1% of the amount.

Step 2 — Redeem exit-load-free tranches first: Jan 2024–Apr 2025 tranches are definitely clear (14–29 months). Redeem these immediately. Hold any tranche that still has a load until it clears.

Step 3 — Deploy as lumpsums this week: ₹8L → Canara Robeco · ₹6L → Parag Parikh · ₹4L → Axis Midcap · ₹2L → Kotak Midcap. Do not use STP — NAV is actively declining so a lump redemption and immediate redeployment is better than drip-transfer.

Tax offset: The ₹28K LTCG loss from Nippon LC crystallises a capital loss. This offsets LTCG gains from Axis Midcap (₹5.71L gain, ~₹57K tax liability) if you choose to book partial profits — though letting Axis compound is more valuable.

Annual review — Jun 2027: Check mid cap has not crept above 50%. Assess Parag Parikh (if still flat by Dec 2026, consider switching to domestic flexi). Get full HDFC Small Cap tranche history from MFCentral.

Equity & cash deployment strategy

based on MF composition + liquid cash — not advice

LIQUID CASH POSITION

CASH NRE	CASH NRO	DEPLOYABLE
₹ 23.72 L	₹ 9122	₹ 18.81 L

DIRECT EQUITY — CURRENT HOLDINGS (2 stocks)

STOCK	CURRENT	P/L	SECTOR
HDFCBANK	₹ 11.30 L	+₹ 4770	—
PRICOLLTD	₹ 5.12 L	+₹ 71964	—

BY SECTOR

Other

100% · ₹ 16.42 L

How much cash to deploy into direct equity? Your MF portfolio is already ~74% of investable assets. Direct equity adds concentration risk. A reasonable rule: keep 3–6 months of expenses as cash buffer (₹5–10L), invest the rest systematically rather than all at once. With ₹18.8L deployable, consider staggering ₹1–2L/month into stocks over 12–18 months.

Avoid mid/small-cap stocks in direct equity. Your MF portfolio is already 59% mid+small cap — one of the highest-risk tilts. Adding mid-cap stocks on top doubles down on the same risk. After the Nippon LC rebalance it drops to ~41% but still warrants caution. Direct equity picks should be large-cap quality names only.

Sector gaps to consider for direct equity (complement to MF portfolio):

Banking / NBFC: Typically underweighted in mid-cap heavy MF portfolios. Large PSU banks or quality private banks offer dividend yield + earnings stability. Examples: HDFC Bank, SBI, Kotak Bank, Bajaj Finance

Pharma / Healthcare: Defensive sector with global export growth. Good portfolio hedge vs domestic equity corrections. Examples: Sun Pharma, Cipla, Dr Reddy's, Divi's Labs

IT / Technology: USD-earning sector — natural currency hedge for an NRI. Resilient in INR depreciation environments. Examples: Infosys, TCS, HCL Tech, Wipro

Consumer / FMCG: Stable earnings, pricing power, defensive. Balances the cyclical nature of your mid-cap MF tilt. Examples: HUL, Nestle, Dabur, Marico

Capital Goods / Infrastructure: India's capex supercycle — if not already in MFs. Check overlap with existing holdings first. Examples: L&T, ABB India, Siemens, BEL

DELL (US equity) already at 23% of net worth. Factor this in — you already have significant US tech/equity exposure through your employer stock. Additional IT stocks in direct equity increases this concentration. Prioritise sectors with no US correlation (domestic consumption, financials, healthcare).

₹23.7L sitting in NRE account. NRE interest is tax-free in India but may be taxable in Malaysia. Consider: (a) ₹5–10L emergency buffer in NRE savings, (b) sweep remainder into liquid/overnight MF for 6–7% yield while you deploy, (c) systematic monthly transfer to equity or MF SIP rather than a single large lumpsum.

Suggested deployment order: (1) Complete MF rebalancing first — exit Nippon LC, deploy ₹20L as planned. (2) Keep ₹5–10L as NRE buffer. (3) With remaining cash, start a ₹1–2L/month stock SIP into 3–4 quality large-cap names across different sectors. (4) Review HDFC Small Cap full tranche history before adding more small cap exposure.

Sector suggestions generated from portfolio composition — not personalised financial advice. Stock examples are for illustration only.
